

Maintenance SUITE

Asset operation and maintenance management

Smart asset management

Data-based management

Monitor, manage, and analyze your assets and systems, unlocking a deeper understanding of your operational efficiency and the status of your equipment. Keep track of all your systems in one place to view and manage asset inventory, inspections, and maintenance.

Akila Asset SUITE takes IoT data and transforms it into customizable dashboards to give you a comprehensive view of your assets and systems.

Optimize maintenance and inspection

Streamline maintenance workflow

Akila Asset SUITE helps you take control of your assets, optimizing systems to increase life span, increase efficiency, and optimize costs.

- **Asset maintenance:** schedule, track, and analyze maintenance work orders.
- **Inventory management:** track and manage maintenance inventory in warehouses.
- **Spare parts management:** track and manage spare parts used in work orders or inspections.
- **Monitoring:** real-time analysis and visualization of BMS or operations data.

Integrated operations

Decrease risk and optimize costs

Manage maintenance, inventory, and inspection through a centralized portal that integrates all your maintenance operations. The integration of asset and operations data enables more effective preventative and predictive maintenance work, increasing compliance, and securing operational continuity.

Asset lifecycle management

Manage and extend asset lifecycles by optimizing maintenance strategies.

Uptime optimization

Maximize equipment uptime with preventative maintenance to ensure high operational continuity and efficiency.

Digitalized ledger

Normalize naming and tagging across sites to increase effectiveness of tracking, training, and reporting.

Compliance tracking

Ensure regulatory compliance according to frameworks, standards, and certifications.
